Listing of Claims:

1. (Withdrawn) A display device comprising:

a plurality of pixels arranged in matrix, each pixel including a first set of three primary color subpixels and only one of a second set of three primary color subpixels,

wherein the first and the second sets of three primary colors have a complementary relation.

2. (Withdrawn) The device of claim 1, wherein the subpixels in each pixel are arranged in a 2 by 2 matrix.

3. (Withdrawn) The device of claim 2, wherein the first set of three primary color subpixels includes red green, and blue subpixels, and the second set of three primary color subpixels includes cyan, magenta, and yellow subpixels.

4. (Withdrawn) The device of claim 3, wherein the red and the blue subpixels are arranged in a row and the red and the green subpixels are arranged in a column.

5. (Previously Presented) A display device comprising:

a plurality of pixels arranged in matrix, each pixel including first to third pairs of subpixels,

wherein the first pair of subpixels are disposed adjacent to each other, the second and the third pairs of subpixels are disposed opposite each other with respect to the first pair of subpixels, and the first to the third pairs of subpixels include first-color subpixels and second-color subpixels; and wherein the entire edge of the first pair of subpixels is enclosed by the second pair of subpixels and the third pair of subpixels,

wherein the first-color and the second-color subpixels have complementary relation and wherein a group consisting of the first-color subpixels include red green, and blue subpixels and a group consisting of the second-color subpixels include cyan, white, and yellow subpixels.

6. (Original) The device of claim 5, wherein each subpixel in the first pair of subpixels is triangular, and the first pair of subpixels form a diamond

7. (Original) The device of claim 6, wherein a boundary between the first pair of subpixels extends in a row or column direction.

8-14. (Canceled)
